C DC Motors

Technical Data of DC Motor

Features

- DC motor has a big starting torque and excellent mobility and when comparing with the same sized AC motor, the output is big and the efficiency is high.
- It is easy to control the speed and change the normal/reverse rotation.
- Compared to AC motor, it is available to manufacture low voltage motor which can be applied to portable machine which uses various spec., especially battery power (12V, 24V).
- Due to the wear of brush, there is a limit in the service life.
- The brush and commutator could cause noise when DC motor operates.

Current, Torque and Speed (r/min)

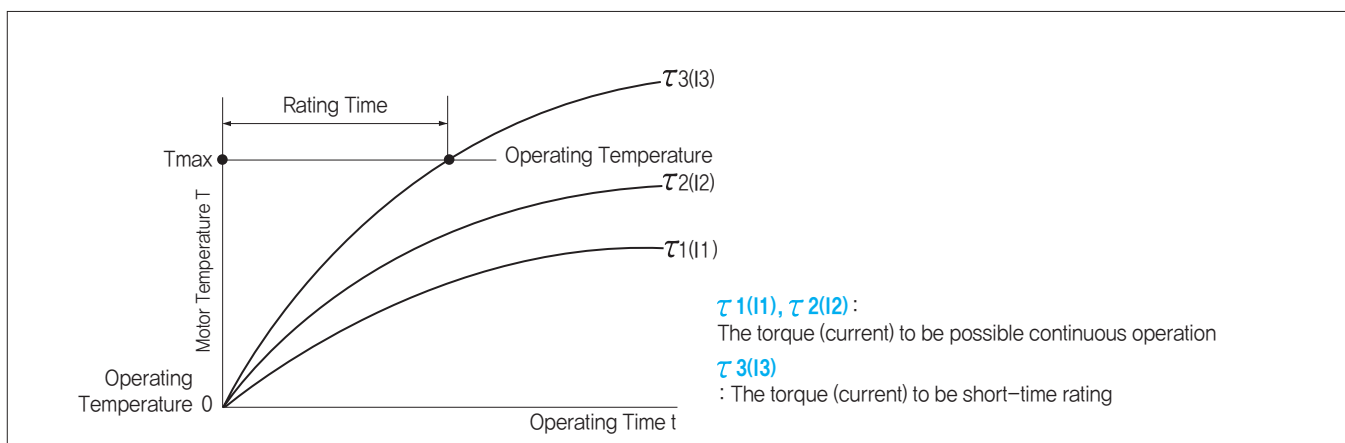

When the voltage of the power supply is fixed, the D.C. magnet motor shows the characteristic in the relationship between torque, speed, and current as below. As shown in the figure below they are almost linear relationships. If you increase the torque on the output shaft of the motor, proportional to that, the rotational speed decreases, and the current increases inversely. If the heating of the motor is ignored, it is the same until the output shaft of the motor is done a stall. (It is possible to control the torque by controlling the current.)

Rating Time

According to increase of current (torque), heat generation in the motor increases. If the temperature of components is saturated within the operating temperature range, it is possible to keep continuous operation.

If it is not saturated within the operating temperature, the time until it exceeds the operating temperature becomes the rated time and is classified as the motor of the short-time rated specification.

Performance of DC Motor in Case of Voltage Change at Power Supply

DC magnet motor can change speed by changing the power supply voltage. The relationship between torque(τ), speed(N) and current(I) of a motor when the voltage is half (1/2) is shown below.

As the below figure, in the relationship between current and speed when power supply voltage was changed to half (1/2), ideal no-load speed "Nt" becomes "Nt/2" and it falls parallel to the performance of rated voltage.

The relationship between current and torque is the same as the rated voltage, but the stall torque " τ_s " falls accordingly as the stall current " I_s " becomes " $I_s/2$ ".

Input, Output and Efficiency of DC motor

The input, output and efficiency can be calculated with the next formula.

$$\begin{aligned} \text{Input(W)} &= \text{Power Supply Voltage(V)} \times \text{Current I(A)} \\ \text{Output(W)} &= \text{Torque } \tau \text{ (kgfcm)} \times \text{Speed N(r/min)} \times 1.027 \times 10^{-2} \\ \text{Efficiency } \eta \text{ (\%)} &= \frac{\text{Output(W)}}{\text{Input(W)}} \times 100 \end{aligned}$$

General Specifications

Item	Specification
Insulation Resistance	100M Ω or more when DC500V MEGA is applied between the windings and the frame after rated motor operation under normal ambient temperature and humidity.
Dielectric Strength	Sufficient to withstand 1.5KV at 50Hz and 60Hz applied between the windings and the frame for 1 minute after rated motor operation under normal ambient temperature and humidity.
Temperature Rise	Temperature rise of windings are 80°C or less measured by the resistance change method after rated motor operation with connecting a gearbox or equivalent heat radiation plate.
Insulation Class	Class B [130°C]
Ambient Temperature	-10°C~+40°C
Ambient Humidity	85% maximum

DSD-90

Speed Controller

Features

- DSD-90 is for adjusting the speed of DC motor, (Applicable to DC 90V)
- Easy speed adjustment by potentiometer on front panel

General Specifications

Item	DSD-90
Rated Voltage	AC 220V 50/60Hz
Voltage Regulation	±10%
Allowable Current	Below 4A
Control System	Phase control
Speed control	Operate with dial
Motor Output	15W ~ 200W
Ambient Temperature	-10°C ~ 40°C
Ambient Humidity	35~85%RH
Insulation Resistance	Over 100MΩ(Base on 500VDC mega)
Dielectric Strength	1500VAC 50/60 for 1minute

Images

Dimensions

DSD-90

Connection Diagram

- 1) when the motor is operated, the temperature of the motor surface should be below 80°C.
- 2) It takes time to reverse the direction, Please reverse the direction after switch off the machine and the motor stops completely.
- 3) Depending on the torque load, Voltage Drop(VD) can occur.
- 4) ADJ is set based on 220V 60Hz, so please contact us if there is any change in the input voltage used. (Output DC 90V at input AC 220V 60Hz)

Technical Data of Gearbox

Definition and Function of Gearbox

It is a speed converter using gears and an instrumental device to reduce the rpm of the motor into the required rpm and get a bigger torque.

Types of DKM Gearboxes

According to Frame Size

Frame Size □60mm Gearbox / Frame Size □70mm Gearbox / Frame Size □80mm Gearbox / Frame Size □90mm Gearbox / Frame Size □104mm Gearbox

According to Direction of Output Shaft of Gearbox

Parallel Gearbox

Parallel Gearbox is the most common type in the small geared motor. DKM Motor employs spur type and helical type. Especially the helical gear is employed for low-noise and high-strength performance. Regarding noise, the important part of the gear is the contacting point with a motor shaft that rotates rapidly. DKM employed helical gear which cut high precisely at that point and realized low-noise performance.

General Box Type (GB Type)	Powerful Box Type (PB Type)	Powerful Flange Type (PF Type)	High Powerful Box Type (HB Type)	High Powerful Flange Type (HF Type)	Ultra Powerful Box Type (UB Type)	Inter-decimal Gearbox
Spur Gear			Helical Gear			
<p>The spur gear is cylindrical gear on which the teeth are cut parallel to the shaft.</p>			<p>The helical gear has teeth cut in helical curve. Its high rate of contact has the advantages of low noise and higher strength compared to the spur gear.</p>			

Right-Angle Gearbox

Right-Angle Gearbox has the advantage of using the limited space with high efficiency and realizes the cost saving effect by the reduction of using power transmission part like coupling. DKM has worm solid type, worm hollow type and helicross type.

Worm Solid Type (W Type, Left Output Shaft)	Worm Solid Type (W Type, Right Output Shaft)	Worm Solid Type (W Type, Bi-Directional Output Shaft)	Worm Hollow Type (WH Type)	Helicross Type (HC Type)
Worm wheel			Helicross gear	
<p>Worm Gear transmits power to right-angle direction by threaded worm and worm wheel.</p>

☉ Maximum Permissible Torque and Efficiency of Gearbox

The output torque of gearbox is in proportion to the gear ratio. But there is limit in the size of load which can be applied to the gearbox in specific gear ratio depending on gear construction and materials etc. affecting the gearbox mechanical strength. This torque is called the maximum permissible torque. Two types of maximum permissible torque of general gearboxes are shown in the figure.

- The calculation of permissible torque at the output shaft of the gearbox is as below:

$$TG = TM \times i \times \eta$$

TG: Output torque of Gearbox TM: Motor torque i: Gear reduction ratio η: Gearbox efficiency

D Gearbox

Technical Data of Gearbox

● Efficiency of Parallel Gearbox

Model	Ratio	2	3	3.6	5	6	7.5	9	10	13	15	18	20	25	30	36	40	50	60	75	90	100	120	150	180	200	250	300	360

10HC □ □		66%	73%							66%						

⊙ Speed and Direction of Rotations

⊙ Speed

This refers to the speed of rotation at the gearbox output shaft. The speed is calculated by dividing the motor's synchronous speed by the gear ratio. The actual speed, according to the load condition, is 2~20% less than the displayed value. The speed is calculated with the following equation:

$$NG = \frac{NM}{i} \text{ [r/min]}$$

NG: Speed of Gearbox [r/min]
 NM: Speed of Motor [r/min]
 i: Gear reduction ratio

⊙ Direction of Rotation

This refers to the direction of rotation viewed from the output shaft. The direction of shaft rotation may differ from motor shaft rotation depending on the gear ratio of the gearbox.

● Rotating Direction of Gearbox Output Shaft

Model	Ratio	2	3	3.6	5	6	7.5	9	10	12.5	15	18	20	25	30	36	40	50	60	75	90	100	120	150	180	200	250	300	360

Model	Ratio	15	20	25	30	40	50	60	80	100	120	160	200	225	240
9HC □ □		-	-	-	-	-	-	-	-	-	-	-	-	-	-
10HC □ □		-	-	-	-	-	-	-	-	-	-	-	-	-	-

- not available
- same direction as the motor shaft
- opposite direction from the motor shaft

* In case of using an inter-decimal gearbox, the rotating speed of output shaft will be reduce by 10:1 but the rotating direction is the same as the gearbox's direction.

Gearbox Life Expectancy and Service Factor

- The life expectancy of the gearbox varies depending on load fluctuation and is determined by the 'service factor' based on its load. Service factor is a coefficient that is used to estimate the service life of the gearbox. This value is generally derived from experience and based on the type of load and operating conditions. The standard life can be expected when the product is operated at service factor 1.0. The life of a component during a particular application is estimated by dividing the standard life expectancy by the service factor. For example, if the motor is operating with an ordinary load for 8 continuous hours a day, the service factor is 1.0. Thus, if the operation continues within the permissible torque for the gearbox and within the range of the prescribed temperature (letting the gearbox case temperature stay below 50°C), the life expectancy of the gearbox is 10,000 hours for the ball bearing type and 2,000 hours for the metal type. However, if a ball bearing type of gearbox is operating for 24 hours a day, the service factor becomes 1.5 so that the life expectancy decreases to 1/1.5. Therefore the service factor should be taken into account to select such a motor and a gearbox which have the biggest permissible torque.

● Example of Load and Service Factor

Type of Load	Service Factor			Operation Example
	5 hours/day	8 hours/day	24 hours/day	
Constant	0.8	1.0	1.5	Unidirectional, continuous run
Light impact/Changeable load	1.2	1.5	2.0	Frequent start/stop, reverse
Heavy impact	1.5	2.0	2.5	Very frequent start/stop, reverse

● Standard Life Expectancy

Ball Bearing Type*	5,000 hours
Metal Bearing Type	2,000 hours

* 5,000 hours when used on reversible motor

Overhung Load and Thrust Load

- The overhung load is defined as a load applied to the output shaft in the right-angle direction. This load is generated when the gearbox is coupled to the machine using a chain, belt, etc., but not when the gearbox is directly connected to the coupling. The thrust load is defined as a load applied to the output shaft of the gearbox in the axial direction.

- Since the overhung load exerts a load directly on the bearing, it affects the life span of the gearbox. The overhung load can be calculated from the following equation.

$$W = \frac{K \times T \times f}{r} \quad [\text{kg}]$$

W: Overhung load [kg]
K: Weight coefficient by driving method
T: Delivery force of a gearbox output shaft [kgfcm]
f: Service factor
r: Effective radius of gear, pulley, etc. [cm]

Load Coefficient by Driving Method

Driving Method	K
Chain, Sprocket	1
Gear	1.25
V-Belt	1.5
Flat Belt	2.5

D Gearbox

Technical Data of Gearbox

- If the motor operates with the calculated overhung load exceeding the maximum allowable value in the below table, the output shaft may bend and fatigue deformation may occur due to the repeated load. So consider it and take care in sizing.

Model	Gear Ratio	Maximum Permissible Torque (kgfcm)	Permissible Overhung Load (kg)	Permissible Thrust Load(kg)
6GBD □ MH	3 ~ 18	1~7	6	3
	25~250	7~30	15

10HC □ □	15~60	200~1067	280	-
	80~240	1067~3000	380	-

- In case the calculated overhung load value exceeds the allowable value above, please set up the structure of the motor as shown in the picture to withstand the overhung load.
- Also, if a load should be directly imposed on the output shaft, please place the load as near to the gearbox as possible to avoid the one-sided load.
- In case a helical gear or a worm gear is employed as an output delivery mechanism, make sure not to exceed both the overhung load and the thrust load simultaneously.

Backlash Noise of Gearbox

Operating Noise of Gearbox

The backlash noise can be indicated by operating noise value. DKM Gearbox's operating noise is like below.

Frame Size	Limit of Operating
70mm	40dB
80mm	42dB
90mm	49dB

Reference

- Operating noise value is measured at a distance of 1m from the side of the gearbox.
- dB (decibel) is a unit of measurement which is used to indicate how loud a sound is.
- Level of operating noise (Ref. value)
 - 20dB --- The sound of shaking leaves
 - 30dB --- The sound in suburb of city in night time
 - 40dB --- The sound in a silent park
 - 50dB --- The sound in a silent office

☉ The Check Point of Gearbox Noise

- **Noise under No Load**

The backlash noise depends on the situation of load. For example, in case of rotation at no load, gear could pop and crash between them therefore there could be little vibration and it could cause noise. This noise can be restrained and controlled by carrying some friction load.

- **Noise when mounted with load**

If a gearbox is not mounted on the bracket properly, there could be some noise by vibration caused by eccentric force. In this case, please check the mounting position.

- **Noise of Damaged Gear**

When attaching a gearbox to a motor, users have to turn the gearbox slowly according to the shape of the pinion. Otherwise, the gear could get damaged by the effect of overloading sequences. Also, there might be abnormal noise in the gearbox. So please handle the gearbox with special care in assembly.

☉ Assembly Method of Motor and Gearbox

- To assemble the motor and the gearbox, adjust the assembling faces together in such a way as shown in the figure on the right and turn slowly to complete the assembly. When doing the assembly, special care should be taken neither to exert excessive force on the motor shaft nor to hit the inside of the gearbox. Otherwise, the gear will get damaged, resulting in an abnormal noise and a shortened lifetime of the motor.

- Use the provided mounting screws for assembly of the gearbox and the motor, and tighten the screws correctly. Be sure there is no-gab between motor flange, the gearbox surface and the mounting surface.

1) Enter the gear ratio in the box (□) within the gearbox model name.

2) A colored background indicates the gear shaft rotation in the same direction as the motor shaft; a white background indicates the rotation in the opposite direction.

3) The rotating speed is calculated by dividing the motor's synchronous speed (50Hz: 1,500r/min, 60Hz: 1,800r/min) by the gear ratio.

The actual speed is 2~20% less than the displayed value, depending on the size of the load.

4) Calculation of N.m = kgfcm X 0.98

1) Enter the gear ratio in the box (□) within the gearbox model name.

2) A colored background indicates the gear shaft rotation in the same direction as the motor shaft: a white background indicates the rotation in the opposite direction.

3) The rotating speed is calculated by dividing the motor's synchronous speed (50Hz: 1,500r/min, 60Hz: 1,800r/min) by the gear ratio. The actual speed is 2~20% less than the displayed value, depending on the size of the load.

4) Calculation of N.m ≈ kgfcm X 0.98

- 1) Enter the gear ratio in the box (□) within the gearbox model name.
- 2) The rotating speed is calculated by dividing the motor's synchronous speed (50Hz: 1,500r/min, 60Hz: 1,800r/min) by the gear ratio. The actual speed is 2~20% less than the displayed value, depending on the size of the load.
- 3) Calculation of N.m \approx kgfcm X 0.98

Dimensions (9HC□-B)

- Gear Ratio 1/15~1/60

D Gearbox

Right-Angle Gearbox

- Gear Ratio 1/80 ~ 1/240

WEIGHT

Model	WEIGHT(Kg)
9HC15-B	4,05
9HC20-B~9HC60-B	4,1
9HC80-B~9HC240-B	4,75

SHAFT

* The shaft is sold separately

Dimensions (10HC□-B)

- Gear Ratio 1/15~1/60

- Gear Ratio 1/80 ~ 1/240

WEIGHT

Model	WEIGHT(Kg)
10HC15□	5,5
10HC20□~10HC60□	5,6
10HC80□~10HC240□	6,4

SHAFT

* The output flange and shaft are sold separately

Inter-decimal Gearbox

Frame Size 80mm Model : 8XD10 □ □ **Frame Size 90mm Model : 9XD10** □ □

* Enter the model type of attaching gearbox in the box (□) within the model name.

8XD10□□: GG, GW

9XD10□□: GG, GW, GP, GH, GZ, PP, PW, PH, PZ

- In case of requiring high gear reduction ratio that cannot be generated by single gearbox, please use Inter-decimal gearbox with a general gearbox.
- Please be advised that in this case only the revolution speed of the output shaft will be reduced by 10:1 without increasing of maximum permissible torque.

Dimensions

● Model: 8XD10□□

● Model: 9XD10□□

● **WEIGHT**

Model	WEIGHT(Kg)
8XD10□□	0,45
9XD10□□	0,6

How to Attach an Inter-decimal Gearbox?

G type Motor + 9XD10GG + G type Gearbox

G type Motor + 9XD10GP + P type Gearbox

G type Motor + 9XD10GH + H type Gearbox

G type Motor + 9XD10GZ + WH type Gearbox

G type Motor + 9XD10GW + W type Gearbox

P type Motor + 9XD10PW + W type Gearbox

P type Motor + 9XD10PH + H type Gearbox

P type Motor + 9XD10PZ + WH type Gearbox

P type Motor + 9XD10PP + P type Gearbox

E Options

- E-01 Mounting Bracket
- E-03 Extension Cable
- E-04 Output Flange / Output Shaft

E Options

Mounting Bracket

Mounting Bracket

It enables motor/gearbox to be mounted on installation place.
DKM has mounting brackets of frame size □70/80/90mm for motors and gearboxes.

Product Code

Dimensions

For Frame Size □70mm

● Model: DBKM-70

For Frame Size □80mm

● Model: DBKM-80

For Frame Size □90mm

● Model: DBKM-90

Product Code

Dimensions

For Frame Size □80mm

● Model: 8DBK

For Frame Size □90mm

● Model: 9DBK

E Options

Extension Cable

Extension Cable

This is for the connection between speed control motors and speed controllers.

The basic length of extension cable is 0.3m. So if longer needed, please order the cable additionally.

Dimension

MODEL	Length of cable (L)
DEW-05	0.5m
DEW-10	1.0m
DEW-15	1.5m
DEW-20	2.0m
DEW-30	3.0m
DEW-50	5.0m

Flange(Output / Input)

It is available to fix/install worm hollow type gearboxes by attaching output flange to the gearbox.

Dimensions

● MODEL: WHG030-Fa

● MODEL: WHG040-Fa

● MODEL: 040-Flange-71B5

● MODEL: 040-Flange-71B14

E

Output Flange / Output Shaft

Output Shaft

These are output shafts to be attached to worm hollow type gearboxes.
There are unidirectional output shaft and bi-directional output shaft.

Dimensions

Unidirectional MODEL: 030 SHAFT-S

Bi-directional MODEL: 030 SHAFT-D

KEY SPEC

Unidirectional MODEL: 040 SHAFT-S
